

SyscomERP Overview

ERP software solutions for textile, apparel and footwear companies

SyscomERP is a modern and flexible ERP Enterprise Resource Planning business solution specifically designed and developed for Textile and Apparel companies. Designed to grow as your company grows, SyscomERP is highly scaleable and suitable for organisations from 10 to 500 users. Used by some of the industry's best and well known names, SyscomERP represents a proven, affordable solution requiring the minimum of maintenance and IT resource, and offers significant business advantage with a rapid return on investment (ROI).

Intuitive integration

SyscomERP offers a complete financials, analytics and business management system that unifies data and processes across the business, and connects staff, customers and suppliers regardless of time or location.

Designed to be intuitive and easy to use, SyscomERP consists of a variety of integrated modules covering Product Development, Financials, Manufacturing, Procurement and Distribution. These modules can be combined together to form a complete system suitable for textile and apparel companies of all types including—**manufacturers, contract suppliers to high street retailers, importers and distributors of branded ranges**. It is particularly well suited to companies within the **corporate and work wear sectors** offering an integrated wardrobe management module; for example, wearers can view images of the items they require, review garment details, and received advice on garment care.

Group or individual operations

SyscomERP is a fully multi-company, multi-currency and multi-lingual system and is ideal for both individual or group operations. Designed for today's demanding business environment, the system is highly functional and by the use of flags and settings, can be

tailored to work in exactly the way your business works, yet retain the advantages of a packaged solution.

Reporting

SyscomERP is delivered with a wealth of reports as standard. It offers powerful reporting and analytical tools that enable you to convert the extensive data the system holds into the valuable and meaningful information your business needs.

Web enabled

SyscomERP is fully web enabled and offers a wide variety of user interfaces, enabling you to deploy those that best fit the needs of individual departments and business processes. As an example, Web Wardrobe is an extension of the core Wardrobe Management solution facilitating the roll out or ordering facilities to the wearers, enabling them to self manage their entitlement / allowances on-line. Tolerances can be

Integrated business software solutions & proactive IT services

Syscom is dedicated to helping companies become more competitive, profitable and efficient. With over 35 years experience providing integrated business software solutions and proactive IT services, we specialise in providing powerful enterprise resource planning ERP software applications and client-tailored IT services to organisations in the manufacturing, distribution, textile and apparel sectors.

Our customers are among the leading names in their industries, constantly striving for improved business success, and we are there to support them every step of the way. Working on a partnership basis with our clients, we are committed to providing technology and services that evolve with their business to help them achieve their goals and thrive in today's competitive environment.

As a **Microsoft Gold Partner** our product portfolio includes Microsoft Dynamics software applications as well as Syscom authored and Progress based systems. Our product consultants are experts within the industries we serve, allowing us to take a consultative approach to identifying the optimum solution for each client's unique needs. We also recognise that the provision of software represents only part of a business solution, always working in an on-going partnership with our clients and offering a complete range of complementary services and consultancy.
